Tack Coat

Tack Coat

Tack Coat

Creating better bonds between asphalt layers

Tack Coat is a light spray of diluted emulsion to ensure an effective, clean bond between new and base asphalt layers.

Common emulsion used in Ontario is SS-1 diluted 50% with water.

Municipalities have been investigating the use of trackless tack as an alternative to regular tack.

This would eliminate the tracking of the emulsion onto streets other than the ones being paved.

ADVANTAGES

- Helps eliminate slippage or delamination.
- Helps reduce centre line cracking.
- Ensures an effective clean bond between new and base asphalt layers.
- OptiShield® is a great alternative from Canadian Shield Pavement Preservation Products Ltd. for trackless tack.
- Cornell Construction Limited owns a fleet of computerized dispensing trucks for accurate, uniform applications.
